

LIST OF REVIEWERS

Editorial Board would like to thank and express appreciation to all peer-reviewers who have reviewed the manuscripts for publication of Current Biomedicine, Vol 2, No 1, Jan 2024.

Amaq Fadholly, Dr., drh., M.Si, Sekolah Kedokteran Hewan dan Biomedis, IPB University

Arief Boediono, Prof., drh., Ph.D., PA.Vet.(K), Sekolah Kedokteran Hewan dan Biomedis, IPB University

Bayu Febram Prasetyo, Dr., S.Si., Apt., M.Si., Sekolah Kedokteran Hewan dan Biomedis, IPB University

Bina Lohita Sari, Dr., apt., M.Pd., M.Farm., Fakultas Matematika dan Ilmu Pengetahuan Alam, Universitas Pakuan

Diah Nugrahani Pristihadi, Dr., drh., M.Si, Sekolah Kedokteran Hewan dan Biomedis, IPB University

Dordia Anindita Rotinsulu, drh., M.Si., Sekolah Kedokteran Hewan dan Biomedis, IPB University

I Wayan Tegur Wibawan, Prof., Dr., drh., MS, Sekolah Kedokteran Hewan dan Biomedis, IPB University

Ida Fitriana, S.Farm., Apt., M.Sc., Fakultas Kedokteran Hewan, Universitas Gadjah Mada

Koekoeh Santoso, Dr., drh., Sekolah Kedokteran Hewan dan Biomedis, IPB University

Mokhamad Fahrudin, drh., Ph.D., Sekolah Kedokteran Hewan dan Biomedis, IPB University

Novericko Ginger Budiono, Dr., drh., M.Si, Sekolah Kedokteran Hewan dan Biomedis, IPB University

Ratih Rinendyaputri, M. Biomed., Pusat Riset Biomedis, Organisasi Riset Kesehatan, Badan Riset dan Inovasi Nasional

Safika Safika, Dr., drh., M.Kes., Sekolah Kedokteran Hewan dan Biomedis, IPB University

Siti Aisyah, Dr., drh., M.Si., Fakultas Kedokteran Hewan, Universitas Syiah Kuala

Sri Rahmatul Laila, Dr., drh., M.Si, Sekolah Kedokteran Hewan dan Biomedis, IPB University

Tutik Wresdiyati, Prof., drh., Ph.D., PA.Vet., Sekolah Kedokteran Hewan dan Biomedis, IPB University

Vista Budiariati, Dr., drh., M.Si., Fakultas Kedokteran Hewan, Universitas Gadjah Mada

Wasmen Manalu, Prof., Ir., Ph.D., Sekolah Kedokteran Hewan dan Biomedis, IPB University

AUTHOR GUIDELINES

General Guidelines

- Articles submitted for publication in Current Biomedicine must be original, in accordance with the scope of the journal, and have not been published or submitted in any journal, whether in a proceeding, scientific journal, or any form of publication. Articles must be free from plagiarism, misrepresentation, and falsification practices. The editor will check for plagiarism.
- Articles can be written in good Indonesian or English, following the rules of the language used.
- Articles proposed for publication include research, reviews, case studies, or short communication.
- The proposed article does not contain things that violate the rules of bioethical research.
- The article is written in manuscript form using Microsoft Word, with an A4 page size (210×297 mm). The left margin is 2.5 cm, top 3 cm, right 2 cm, and bottom 2 cm. All parts of the text in the manuscript are written using Times New Roman font 12 pt and double spaced, given page numbers and line numbers on each page.
- Tables and figures are placed in appropriate locations in the text. Tables and Figures are placed after the first mention in the sentence (text). Titles and text in tables, as well as titles and descriptions of images, use 10 pt font size, single-spaced. The description below the table uses a font size of 8 pt.
- Articles are written in order: Title, author's name, affiliation/institution, abstract, keywords, introduction, methods, results, discussion, conclusion, and references.
- Articles are submitted only via the online system at: <https://journal.ipb.ac.id/index.php/currbiomed>. The author could send an email for any questions or help to currbiomed@apps.ipb.ac.id.

Specific Guidelines

- **Article Type.**
 - » **Research.** A research article is a complete study of a research activity or part of a research with a complete study of the topic. The article must meet scientific principles, including experimental design and adequate statistical analysis. The study must meet the bioethical aspects of research. Meta-analytical studies and epidemiological studies are included in the category of research articles. Research articles use subtitles consisting of Introduction, Materials and Methods, Results, Discussion, and Conclusions.
 - » **Review.** A review article is comprehensive, critical-analytical, provides current information on a topic, or contains forward-looking views on a problem. The review article must provide the latest information from previous studies, convey the author's analysis and critical study of the collection of facts or data, and conclude it into an acceptable view or one that will be used for future development. Review articles use subtitles that suit the author's needs, starting with the Introduction and ending with Conclusions/ Recommendations/ Future Perspectives.
 - » **Case Study.** A case study article is a report of an incident or case in the clinical, pathological, or other fields deemed necessary to be published but insufficient to be written as a research paper. Case study articles that provide new information or additional contributions to the existing literature are preferred. Case study articles use subtitles: Introduction, Case Description, Intervention and Therapy, Discussion, and Conclusions.
 - » **Short Communication.** A short communication article concerns a relatively new idea or research result that only qualifies as a partial research article. Short communication articles that contain the latest information and help develop or apply a science. Short communication articles remain in a format like other articles (adapted to their type, but without subtitles) and with fewer pages (approximately half or one-third the length of a regular article).
- **Title.** The title should be short, clear, specific, and informative and reflect the manuscript's content. The maximum length of the title is about 16 words with a capital letter in the beginning title (sentence case).
- **Author(s).** The names of all authors are written under the title in full but without a title. Authors from different institutions are assigned a different superscript letter at the end of each name. In addition, it is necessary to identify the author who is responsible for the correspondence or acts as the corresponding author.

- **Abstract.** The abstract is written briefly with a maximum length of 250 words. Abstract writing should avoid abbreviations and not include references/libraries. The abstract must contain the background, objectives, methods, results, and conclusions.
- **Keywords.** Keywords contain at most five words or phrases.
- **Introduction.** The introduction briefly explains the background of the research, which is supported by the relevant and up-to-date references/libraries (literature), and the purpose of the research/writing.
- **Methods.** Methods are written in a detailed, clear, and complete manner and are used to ensure that other researchers can repeat or reproduce the results.
- **Results.** Results are written separately from the discussion. Results can be presented in the form of Tables or Figures. Each existing table or figure has been mentioned in the text and numbered according to its appearance. The main results or those that support the objectives and conclusions need to be interpreted or emphasized to make it easier for the reader to understand the research results.

Use the following system for writing:

- » Temperature: degrees Celsius, e.g., 37°C
- » Units: International System (SI), e.g., 2 mol/L (not M or N), 20.4 mm (not inches)
- » Time: e.g., 2 seconds, 4 minutes, 3 hours, five days, Day 5 (the fifth day), seven years, Year 4 (the fourth year).
- » Dosage: in kg except for mice in g
- » Centrifugation: in gravity (×g), avoid rpm.
- » Numbers: 8.9 mm (instead of 0.089 m), 2 mol (instead of 2×10⁻⁶ mol), 2-3 g, 1 m×2 m×2 m, 8.9 ± 2.1 kg, and 11 ± 3 nmol/L.
- » Percentage: 6%–7%
- » Date: July 7, 2022
- » Statistics: (P<0.05)
- » Use the symbol (–) for meaning up to, for example, pages 2–5. Use the sign (-), e.g., day-1.
- » Notice the difference between decimals and numbers (in thousands) between Bahasa Indonesia and English. Bahasa Indonesia: dosis 2,8 mg/kg Bb, populasi sapi 2.500 ekor. English: dose of 2.8 mg/kg BW, cattle population was 2,500 head.

- **Table.** The table only uses horizontal lines for column headings and table ending lines, while vertical lines are not displayed. Titles and text in tables use 10 pt font, single spaced. Notes below the table use 8 pt font size.

Table 1 The table's title is written in sentence case

Explanation	Explanation#					
	Observation 1		Observation 2		Observation 3	
	A	B	A	B	A	B
Treatment 1	24	0	7	17	6	18
Treatment 2	21	3	0	24	9	15
χ^2	3.2		8.1		0.8	
p-value	0.07		0.00*		0.35	

Based on SNI 01-3141-2011 about Part 1 Raw-milk (BSN, 2011); * Significant correlation (P<0.05); TPC: Total plate count, SCC: Somatic cell count, χ^2 : chi-square value, p-value: nilai asymptotic significance value

- **Figure.** Images must be in JPEG or PDF format with a minimum of 300 dpi. Images with more than one photo/graphic are labeled with the letters A, B, C, etc., in the bottom left corner of each photo/graphic. Image titles and descriptions use a 10 pt font size. Authors may send tables or images in separate files for particular needs or printing or editing.

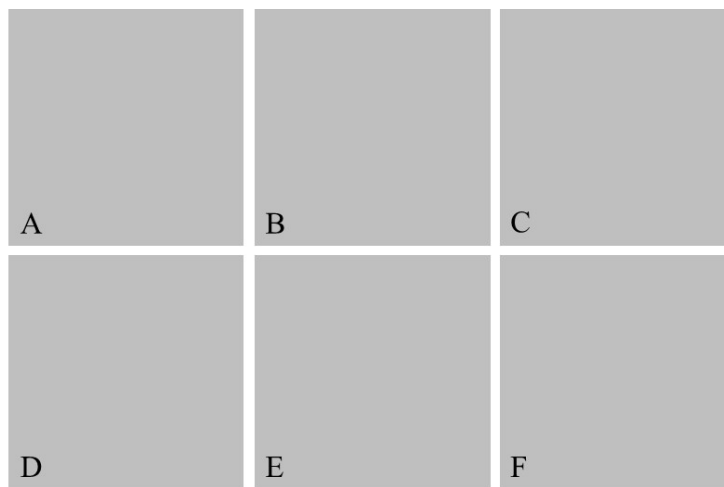

Figure 1 Images must be able to stand alone and be understood even though they are separate from the text. (A) What pictures and explanations; (B) What pictures and explanations; (C) What pictures and explanations; (D–F) What pictures and explanations. Explanation of symbols or abbreviations contained in the image. Magnification should use a scale line or bar, for example, bar: 100 μm . Or if forced to use multiples, for example, 100 \times magnification.

- **Discussion.** The discussion is written comprehensively. The results obtained are discussed systematically and constructively to support the research objectives and strengthen the conclusions.
- **Conclusions.** Conclusions are presented briefly, mentioning the main conclusions from the results obtained.
- **References.** References used a maximum of the last ten years, with a minimum of 80% being journal articles. Old references that are indeed the primary or monumental references for the topic to be conveyed may be used, and the number is at most 10%. If using Endnote or Mendeley tools for reference, the author may use APA style. Then, the layout team will adapt to the journal's reference format during copyediting process.

How to write a citation in the text:

- » One Author: (Summit, 2022)
- » Two authors: (Sasseville & Diters, 2008)
- » More than two authors: (Bellantari et al., 2021)
- » More than one reference, separated by a semicolon (;) and sorted by year: (Sasseville & Diters, 2008; Bellantari et al., 2021; Summit, 2022)

How to write a reference in the References:

References are listed in alphabetical order by author's name.

Additional Guidelines

- For research with human subjects or using animals, the authors attach informed consent, ethical approval, or animal use ethics from the Institutional Ethical Board according to the type of research and existing regulations.
- Authors are required to declare any potential conflict of interest.
- The author describes the contribution of each author involved in the research.
- The corresponding author represents all researcher members who fill out a letter of originality of writing and research (Author statement form). Each author has read, reviewed, and approved the manuscript to be submitted.
- The corresponding author sends a cover letter together with the main manuscript. The cover letter contains the purpose of sending the manuscript, the significance or novelty of the research, and the author's full name, institution, and E-mail address. The corresponding author includes the address and the telephone number or mobile phone/WA for correspondence purposes.

Checklists before Submission

1. The manuscript has never been published and is not being submitted for publication in another journal.
2. The manuscript does not contain plagiarism material or activity.
3. All authors have acknowledged, read the entire manuscript's contents, and consented to publication.
4. The manuscript topic should fit the scope of the journal.
5. The results section has been separated from the discussion.
6. The writing of decimal numbers has referred to the provisions of the language used. Decimals in Indonesian use a comma (,), while decimals in English use a period (.).
7. The manuscript does not only contain one (single) data set but at least two or more data sets to support conclusions.
8. Manuscripts can be written in Indonesian (with titles and abstracts in English) or in English.
9. Authors can submit manuscripts for the first time in any format. Manuscripts are sent online using the OJS system. The editor will assess the suitability of the scope, research quality, and feasibility of the data set, as well as originality and similarity (the editor will check with Turnitin). An initial decision will be made within 2-5 days of submission. A quicker initial decision will help authors if they are going to submit manuscripts to other journals.
10. For manuscripts approved for review, the author must submit the manuscript per the writing instructions or the format on the template provided. If there are general suggestions regarding the manuscript from the editor, it must be included in the revised manuscript.
11. For the review process, the author may propose 3 (three) prospective reviewers, according to their fields, from different institutions or countries.
12. Only manuscripts that fit the journal's scope, with less than 20% similarity (Turnitin check), and conform to the journal format will be further processed for review.
13. The editor informs the final decision two months after submitting the adequately formatted manuscript unless an additional review process is required or depends on the author's response or revision.
